

Equipment with alternative side in-lead

# CoatMaster "superior"

## SCREEN COATING MACHINE

**Automatic function**

**Individual programming**

**Automatic application of capillary film**

**Drying of the screen in the machine**

**Automatic wipe off of trough edge**

**Infinitely variable speed**

**Side loading of screen**

**Landscape mode for large screens**

**Simultaneous coating of several small screens**

**Separate adjustment of pressure of trough for print side and squeegee side**

Our solution is based on 15 years experience.

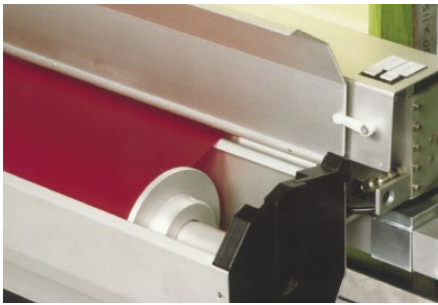

### Integrated drying

Automatic, programmable hot air-drying system. The system is used for either intermediate drying to obtain best coating built up or for the final drying of the screen while it remaining the machine. The drying system is mounted at the squeegee side of the screen. Coating is possible on both sides.

### Cleaning of the coating trough edges truckant

Single or doubled sided built-in device for automatic cleaning of the edges of the coating troughs during the coating process. The sponge wipes off the remaining emulsion. The sponge is automatically turned at the end of the pass. The programmable system can be mounted on either side of the machine.

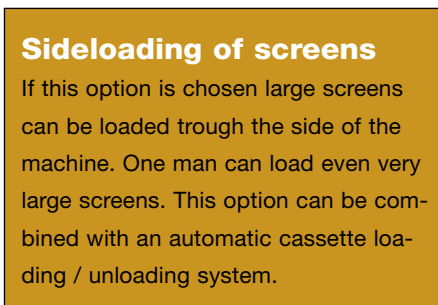

### Automatic application of capillary film

The unique Auto-Cassette has been proven in praxis over years. This cassette will automatically dispense and apply capillary film to mesh just by pushing the start button! No manual handling, no dust, no fingertips. Direct/indirect system is also possible. Within seconds the system can be changed to emulsion coating.

### Automatic application of capillary film

If this option is chosen large screens can be loaded trough the side of the machine. One man can load even very large screens. This option can be combined with an automatic cassette loading/unloading system.

### Sideloading of screens

If this option is chosen large screens can be loaded trough the side of the machine. One man can load even very large screens. This option can be combined with an automatic cassette loading / unloading system.
